

**ENERGY PRO**

Temporary power supply

**Energy Pro** Company specializes in the off-grid power supply for the major cultural, entertainment, political and sporting events.

**Diesel generating sets** from **our own rental fleet**, manufactured in U.K. by FG Wilson and Cummins, the best in emission, noise, performance, quality of the generated energy, combined with our achievements in energy distribution and monitoring are the basis for our technological solution.

This work comprises:  
power supply design  
and getting an  
approval of the energy  
supply schemes;  
installation of the  
equipment, mounting  
cable connection,  
switchboard  
equipment, pre-  
commissioning work;  
operating temporary  
energy complexes,  
including diesel  
refueling; dismantling  
and removal of the  
equipment, i.e. **the  
turnkey solution.**

Our services are needed, where the energy sources are simply **absent** (for example, open air festivals), or the existing energy supply is **insufficient** (for example, a formal closing ceremony at a stadium), or for **reservation** of the existing power supply (for example, TV-broadcasting).

We have a good command of **the international requirements** to the temporary power supply systems.

The use of the temporary power supply systems is essential to ensure that television broadcasts, as a main and reservation power source. For example, during the Eurovision-2009 Song Contest in Moscow, were used 27 diesel generating sets with a total capacity of 12.4 MWt.

### SOME OF OUR PROJECTS:

The 2008 UEFA Champions League Final (Luzhniki Stadium and the Red Square);  
The 54<sup>th</sup> Eurovision Song Contest - Moscow 2009;  
The Ceremonial Opening of the 7<sup>th</sup> Winter Asian Games 2011, (Astana);
